Timing heatmap: worst slack and failing endpoints

Vivado 2024.2 | xc7a35tcsg324-1 | OOC post-synthesis

Clock target: 50 MHz (20 ns) | every cell uses nanoseconds

	Setup WNS	Hold WHS	Pulse-width WPWS
Original core	**+2.994** 0 / 5944 fail	**-0.956** 368 / 5944 fail	**+9.500** 0 / 1962 fail
With isqrt	**-30.800** 341 / 5947 fail	**-0.956** 368 / 5947 fail	**+9.500** 0 / 1963 fail

Slack (ns): negative = violation; nonnegative = check met

Original core fails hold; with isqrt fails hold.

HD.CLK_SRC unset; routing and clock delays are estimates. No implemented Fmax is claimed.
